What is a down-the-hole drill?

A down-the-hole drill, usually called DTH by most professionals, is basically a jackhammer screwed on the bottom of a drill string. The fast hammer action breaks hard rock into small cuttings and dust that are evacuated by a fluid (air, water or drilling mud). The DTH hammer is one of the fastest ways to drill hard rock.

What is downhole tool insurance?

Downhole tool insurance covers the replacement cost of scheduled tools while they are below the rotary table in a pre-approved well. The tools are covered for loss or damage while downhole. Our main loss event occurs when the assembly becomes stuck in the wellbore. Some other common terms used for this coverage are:  
What types of tools are covered?

What is a down the hole hammer?

One of the most commonly used tools in the drilling industry to meet such challenging scenarios is the Down the Hole Hammer (DTH hammer). DTH hammers are most used in hard rock formations and are designed to tackle complex tasks like drilling in populated areas without putting existing structures at risk.

How was a hole drilled?

This system could not guarantee a finished hole size and only pure vertical holes could be drilled as the system basically relied on gravity. Debris from the hole was baled out using a baling tube with a clack valve, which was periodically dropped on a winch to capture the slurry, which was then brought to the top of the hole to be discharged.

Can DTH hammers reduce drilling cost per meter?

Much higher penetration rates could be achieved by using DTH hammers which decreased the drilling Cost per Meter in smaller hole diameters. The DTH system completely revolutionised the blast hole industry with many quarries embracing it with open arms.

Can a driller help with waste disposal?

The driller can assist with storage and disposal but should not contractually be made the owner or generator of the waste. It is acknowledged that most contracts pass this on to the contractor, and many accept the waste disposal without a second thought.
