What lubricant should a rock drill use?

Proper rock drill oil selection is the most important maintenance factor in achieving trouble-free drill operation. Higher productivity, less repair expense and improved driller safety are all benefits of selecting a high quality lubricant. A minimum oil viscosity of ISO 100 (SAE Grade 30) should be used for any rock drill application.

How does a rock drill work?

The rock drill requires a compressed air source of suitable pressure and capacity with an oiler to introduce lubricant into the air stream. The quantity of oil is not as important as how it arrives at the tool. The oiler should atomize the oil so that it is entrained in the air stream and not collecting in the air delivery hoses and fittings.
