What is a rotary screw air compressor?

A rotary screw air compressor (sometimes called a "twin-screw compressor") is a type of air compressor that uses a pair of enmeshed helical screws to compress air. As the screws turn, the air is continually compressed. Screw air compressors are widely used for applications that require high CFM (Cubic Feet of air per Minute) and continuous use.

What is a base mounted rotary screw compressor?

Base-mounted rotary screw compressors are stand-alone units that do not include an integrated tank or dryer system. They provide more flexibility in compressor system design; the air drying and storage systems can be customized for the application. Fixed-speed vs. Variable-speed: Screw compressors may be fixed-speed or variable-speed.

How much noise does a rotary screw air compressor make?

A typical rotary screw air compressor will operate at 65-75 dBA, or somewhere between the noise level of a car engine and a vacuum cleaner. A rotary screw air compressor will also generate less vibration. Cooler Temperatures: Typical internal operating temperatures for a rotary screw air compressor are 140-160°F.

How long does a rotary screw air compressor last?

A rotary screw compressor can last up to 100,000 hours with proper maintenance before a rebuild is necessary -- about 6-8 times as long as a reciprocating air compressor. Cleaner Air: Rotary screw air compressors deliver very clean air with low oil carryover.

What is a screw compressor?

Screw compressors are the workhorses of industry and manufacturing. These tough industrial air compressors are widely used for applications requiring high efficiency and continuous airflow, including conveyor systems, manufacturing equipment, process manufacturing, and more.

Are rotary screw air compressors quiet?

Compared to the alternative, yes. The action of the rotary screws is quieter than the action of moving pistons. A rotary screw air compressor may also have a sound-dampening enclosure. A typical rotary screw air compressor will operate at 65-75 dBA, or somewhere between the noise level of a car engine and a vacuum cleaner.
