How does a core drilling rig work?

Depending on the size of the hole, most situations require the drilling rig to be attached to the ground or surface with an anchor, bolt, or vacuum seal to keep the rig stabilized. Because core drilling requires substantial speed and force to get through concrete, a lot of heat is generated during the drilling process.

How deep do rotary core drilling rigs drill?

The drilling rigs generally drill 50mm to 200mm diameter boreholes through rock to depths of up to 100m, carrying out Cone Penetration Tests (CPTs) where necessary. Cable Percussive Boreholes are often drilled to the depth of rock, with Rotary Core Drilling following on for economical reasons, particularly when significant gravel layers are present

What is the first step in setting up a drilling rig?

Position the drilling rig, assemble the rig components and begin drilling. After the geological location for the well has been selected, the surface site for the rig must be acquired and prepared. Rig site preparation will vary for

What types of drilling rigs are available?

The drilling videos featured here on our website showcase the capabilities of various types of drilling rigs, including water well drilling, auger drilling, core drilling, and more.

What are the different types of drilling rigs offered by Simco?

With a focus on the specific processes involved in geothermal drilling, geotechnical drilling, and water well drilling, these drilling videos enable you to see the differences between the various drilling rigs offered by SIMCO. A variety of geothermal drilling videos allow you to view Air Rotary DTH Hammer and Mud Rotary drilling.

This video aims to capture the process of how a core drilling machine in operation, showcasing the techniques, tools, and community effort involved. It's des...
