What is a screw air compressor?

As these screw air compressors are generally not equipped with any valves and have no mechanical forces that cause unbalance, these solutions can be extremely efficient for various applications. This is because a screw compressor works at a higher shaft speed and compresses a large volume of air with small exterior dimensions.

How much does an industrial compressor cost?

A typical industrial compressor might be around 50kW, enough to boost about 2m³ per second of air to the same pressure as a car tire (calculations are given). This might typically cost around \$850/kW on an installed basis (data above). In the energy industry, larger compressors can surpass 10MW-scale.

How much does a CCS compressor cost?

Full details on compressor costs -- capex in \$/kW and energy usage in kWh/ton -- are tabulated in the data-file. This data-file is included as part of TSE's Full Subscription. Compressor cost tend to average \$850/kW on an installed basis for a 50kW-scale compressor. Compression energy for CCS is 90-120kWh/ton.

How much does a CO₂ compressor cost?

In the energy industry, larger compressors can surpass 10MW-scale. Costs can vary by around 10x depending on the context. For example, we think that CO₂ compressors will command a premium, maybe around \$2,000/kW, due to higher-spec materials, the need to handle high pressures and densities, and other complexities of CO₂ compression.
