

What is a down-the-hole drill?

A down-the-hole drill, usually called DTH by most professionals, is basically a jackhammer screwed on the bottom of a drill string. The fast hammer action breaks hard rock into small cuttings and dust that are evacuated by a fluid (air, water or drilling mud). The DTH hammer is one of the fastest ways to drill hard rock.

What is down-the-hole (DTH) drilling?

Down-the-hole (DTH) drilling has made it easier for contractors to drill wells faster and more efficiently, and to transition from dirt boring to rock boring just by adding a compressor and hammer to the drill bit.

What are the advantages of using down-the-hole drilling tools?

The advantages of using down-the-hole drilling tools are numerous. They offer faster penetration rates and lower energy consumption compared to other methods, making them ideal for large-scale projects. Additionally, DTH drills are versatile and can be used in a wide range of geological formations, from soft soil to hard rock.

Why is a drilling system not used on every drill hole?

The system is operated by a geophysical contractor and the procedure requires cooperation from the drill operators because some of the drilling equipment usually stays in the hole to keep it open. This adds to the expense of doing downhole surveys, which is why they are not typically used on every drill hole.

How can geophysical data be collected from a drill hole?

A string of different probes can be connected to collect more than one type of geophysical information. This data not only provides information about the rocks directly intersected by the drill but can shed light on the rocks up to a few hundred meters around the hole, potentially identifying ore zones that were narrowly missed by the drill hole.

What is a downhole geophysical survey?

Schematic drawing of a down-hole geophysical survey (Image: USGS) Downhole, or borehole, geophysical surveys measure the physical properties of rocks along a subsurface drill hole. Explorers use drill holes to collect core or rock chips, to 'map' the rock types down the hole and often send rock chip samples for geochemical analysis.

The main determinant of the DTH drill rod count is depth of drilling. For instance, the number of DTH drill rods needed could be minimal if your only demand is to dig a tens of ...

One of the most crucial components in the system is the down hole hammer. It operates seamlessly with the drill rig, channeling the air or fluid down through the drill string. The down ...

Drillhole Database Traditionally, downhole or drillhole data refers to data contained in four types of file: Collar, Survey, Event and Interval. These are the files commonly used by the Drillhole ...

Powerful and Reliable Down The Hole (DTH) Drilling Solutions Drill King specializes in manufacturing top-quality drilling equipments and drilling tools, ...

The first part of this internship was taking drill hole logs and making them into points in ArcGIS Pro that contain all relevant drill hole information for professional and ...

Types and Applications of Down-the-Hole (DTH) Drill Bits The energy produced by the impactor is transferred to the bit to break the rock, meaning the rock is subject to both ...

Discover the power of down the hole drilling technology featuring superior performance in hard rock, enhanced accuracy, and advanced automation capabilities for efficient and precise ...

In down-the-hole drilling a drill rod is fitted with a hammer at its lower end. The hammer, which is mounted on the drill bit, is activated through the addition of ...

What Are the Key Applications of Low-Pressure DTH Drill Bits? Low-pressure DTH (Down-the-Hole) drill bits are essential tools across various industries including water well drilling, shallow ...

DTH hammer is used for drilling holes through a wide range of rock types, the variety of which continues to extend well beyond the original conception of early blast hole drilling. Down-the ...

Down-the-hole, or DTH drilling allows for reaching greater depths with the hammer located right behind the drill bit. Robit is a leader in DTH products.

DTH drilling, also known as Down-the-Hole drilling, is a method used to drill boreholes into the earth's surface. This technique involves a hammer that is ...
