

Down-the-hole drill pin disassembly video

How do you extract a dowel pin from a hole?

If a dowel pin is lodged in a through hole, try pushing the pin through the entire part. To execute this method, use a pin smaller than the diameter of the pin you wish to extract. Next, align the part on your prototrak so that the smaller pin will be pushed into the plugged hole.

How do you remove a dowel pin on a ProtoTRAK?

To do this, first align the part on a prototrak. Proceed to drill a hole into the pin, tapping it with the largest tap that will fit inside the diameter of the pin. Once the tap has bottomed out, or you reach the designated depth, simply retract the 'z' height on your machine to remove the dowel pin.

How do you assemble a top sub hammer?

Insert the Dowel Pin. Depress spring through hole in Top Sub to verify proper alignment. Insert the Piston into the assembled Top Sub. Fit the Wear Sleeve over the Piston and thread onto the Top Sub. When assembling hammers larger than 4" in the field, steps 7 & 8 are easier with the Top Sub and Piston vertical with the Piston pointing up.

RH560 Down-the-hole hammers RH560 DTH hammer is a robust, reliable addition to surface mining and long-haul production drilling operations. It increases speed and lowers drilling cost ...
