What is down-the-hole (DTH) drilling?

Down-the-hole (DTH) drilling has made it easier for contractors to drill wells faster and more efficiently, and to transition from dirt boring to rock boring just by adding a compressor and hammer to the drill bit.

How does DTH drilling work?

With DTH drilling, contractors can change the drill that they were using for the current directional bore to a rock drill when they encounter rock by connecting the drill with a compressor and a steerable hammer. Well drilling also needed changes to be made to rotary drilling when the well needed to take a turn.

How long did it take to drill a 12,000 ft hole?

The original estimate for completion of a 12,000-foot hole was 30 days using the conventional rotary technique, which was reduced to 13 days using the DTH method. Before DTH was used, drillers would typically case the vertical portion of the well and convert to rotary drilling to drill at a tangent.

What is a DTH directional drill?

The DTH system is easy and quick to adapt to a directional drill and is considered one of the best and most effective methods to drill high-quality holes that are stable and straight. It can be done on both hard and soft rock and is extensively used in the construction, oil and gas, and water well industries.

Which drill tool is best for geothermal drilling?

Mincon tooling has earned a reputation as the driller's choice around the world in geothermal hole and water-well drilling. Upgrade to a Mincon DTH hammer and enjoy using the most advanced drill tooling available. We offer tailored drilling solutions for your project needs.

Which drill hammer is best for deep-hole drilling?

Conquer deep-hole drilling with our hammers that have low air consumption and high rates of productivity. Mincon tooling has earned a reputation as the driller's choice around the world in geothermal hole and water-well drilling. Upgrade to a Mincon DTH hammer and enjoy using the most advanced drill tooling available.
