What is down-the-hole drilling?

Down-the-hole (DTH) drilling is a method used to drill boreholes in hard rock formations for various applications such as mining, construction, and quarrying. This technique involves a down-the-hole drilling machine that uses a down-the-hole hammer to deliver powerful blows to the rock surface, resulting in efficient and precise drilling.

How does a down-the-hole drill work?

In down-the-hole drilling a drill rod is fitted with a hammer at its lower end. The hammer, which is mounted on the drill bit, is activated through the addition of compressed air and driven into the ground - simultaneously rotating and impacting. A flushing current collects the loosened drill cuttings and conveys them upwards.

What is down the hole hammer drilling?

Down the hole hammer drilling also offers the advantage of faster penetration rates, allowing for quicker completion of drilling projects. This increased speed can lead to significant cost savings for companies, as less time spent on drilling means reduced labor costs and improved overall efficiency.

How does a rotary drilling rig work?

A rotary drilling rig, type LB 20, working with down-the-hole hammer inside a casing. A flushing current conveys the loosened drill cuttings upwards and exits at the upper end of the casing. If you have any further questions, please contact our local sales or service team.

How long did it take to drill a 12,000 ft hole?

The original estimate for completion of a 12,000-foot hole was 30 days using the conventional rotary technique, which was reduced to 13 days using the DTH method. Before DTH was used, drillers would typically case the vertical portion of the well and convert to rotary drilling to drill at a tangent.

What are the advantages of down-the-hole (DTH) drilling?

Down-the-hole (DTH) drilling offers a range of advantages that make it a popular choice in the mining and construction industries. From efficiency to reliability, DTH drilling has proven to be a game-changer in various applications. One of the key advantages of down-the-hole (DTH) drilling is its efficiency in hammer piling.
