Rockmore's T Series hammer class is a breakthrough in DTH drilling technology for mining, construction, and water-well applications.

What is a down the hole hammer?

Down-the-Hole refers to where the hammer action occurs when compared to drifter hammers, which hammer on top of the drill string. The DTH hammer piston always makes direct contact with the drill bit and there is generally no loss of transmitted energy as the hammer drills deeper, as is the case with drifter (top hammer) rigs.

What are the advantages of DTH drilling?

DTH drilling offers several advantages, including high drilling speed, efficient energy transfer, and the ability to drill deep, straight holes even in hard rock formations. It is commonly used in applications such as mineral exploration, blasthole drilling, foundation drilling, and water well drilling.
