

# How to add screw oil to Mobil air compressor

What kind of oil does a rotary screw air compressor use?

Generally, rotary screw air compressors use synthetic oil, while recreational compressors may use standard oil. Air compressor oil varies in composition and color but is often yellow or light brown and becomes darker as it becomes contaminated over time. Why do rotary screw air compressors need oil?

What lubricants are used in oil flooded rotary screw air compressors?

Lubricants used in oil-flooded rotary screw air compressors come in many different base fluids (mineral and synthetic) and additive technologies. Synthetic base fluids include polyalphaolefins (PAO), esters, silicones and polyalkylene glycols (PAG).

How do I change the oil on my air compressor?

When changing your air compressor's oil, follow the instructions in your manual. Although the basics of an oil change are simple--drain the old oil and then pour in new oil--the individual steps can be significantly more detailed. As an example, here are the steps required to change the oil in VMAC's G30 gas powered air compressors:

What is the difference between motor oil and air compressor oil?

Unlike motor oil, air compressor oil does not contain detergent and typically has lower amounts of carbon, sulfur, and other contaminants that can cause build-up. Generally, rotary screw air compressors use synthetic oil, while recreational compressors may use standard oil.

How to flush air compressor lubricant?

In the case of incompatibility, it is advisable to flush with one pass, depending on the compressor condition, to eliminate the old product and maximize the benefit. This procedure can be used for flushing any type of air compressor lubricant. Start compressor and allow running up to normal temperatures (185°F/85°C) for approximately one hour.

What is air compressor oil?

Air compressor oil is standard or synthetic oil made specifically for air compressors. Unlike motor oil, air compressor oil does not contain detergent and typically has lower amounts of carbon, sulfur, and other contaminants that can cause build-up.
