

How to connect the screw air compressor sensor

How to install a screw air compressor?

The installation of a screw air compressor can be divided into four aspects: environmental requirements, ground placement requirements, piping installation, and electrical safety considerations. 1. The air compressor should be installed in a surrounding environment that is cool, has low humidity, and is relatively dust-free.

How does a screw compressor work?

A screw compressor can run loaded ('pumping air') or unloaded ('idle'). The inlet/loading valve opens and closes according to air demand. The inlet valve is controlled by a solenoid valve that supplies control air to the inlet/loading valve. Check solenoid valve coil and solenoid valve operation.

How do you connect an air compressor to an air tool?

By having a connector on one end of your air line and a coupler on the other end, you now have the complete method of getting the air from the discharge coupler on the air compressor to your air tool. You plug the coupler on the air hose to your air tool connector.

How do I know if my air compressor is working?

If you have a compressed air dryer, check the dewpoint. Check the current draw with a current clamp meter. If the motor draws excessive current: Try to turn the compressor by hand. It should be possible to turn it around. It should turn around smoothly, without any 'hiccups' (be sure to completely shut down the air compressor!).

Why does my compressor trip on over temperature?

If your compressor trips on over temperature, it could be any of the following: Ambient temperature too high or not enough ventilation. A screw compressor can run loaded ('pumping air') or unloaded ('idle'). The inlet/loading valve opens and closes according to air demand.

What should I do if my air compressor is too low?

If the capacity of the air compressor is really too low, check the following: Check differential pressure over oil separator. Replace separator when necessary. Check and replace compressed air filters (if installed). Compressor does not unload. Check if pressure switch is correctly set and working.
