What is a screw compressor?

2. OVERALL CONSTRUCTION The screw compressor is a sort of rotary positive displacement compressor, and a machine in which successive volumes of gas are confined within a closed space formed by two rotors and casing, and elevated to a higher pressure as the volume of the closed space is decreased by rotation of rotors.

How does a screw compressor differ from a rotary lobe blower?

ROTOR In its construction the screw compressor closely resembles the well-known rotary lobe blower. It differs, however, in its peculiar rotor profile and its very large helix angle (the wrap angle of a main rotor is 300 degrees in most cases). The rotor profile is the unsymmetrical type as shown in Fig-1.2 having both convex and concave faces.

How do you remove a rotor casing from a compressor?

Loosen the hex bolts connecting inlet casing (B01) and rotor casing (B02) Apply jack bolts to the inlet casing to separate it from the rotor casing. Slide the inlet casing horizontally away from the compressor. Set the inlet casing on the work bench external surface up. Remove the retaining rings (L12) from both the male and female sides.
