

How to install a double-barrel gas tank for a diesel air compressor

Where can I add a Compressor tank?

You can add the tank anywhere it's convenient in your garage/workshop. Air from the compressor needs to be plumbed into that tank, and then you need to have a discharge from that tank to your workshop.

Does a small air compressor need a second tank?

The answers to both questions are...yes! With some qualifications, of course. One way you can improve the function of a small air compressor is by adding a second tank to the air compressor, building a greater reservoir of compressed air for you to draw on when you are using an air tool that outstrips the capacity of the compressor.

Should I use a double tank air compressor?

This configuration would be better suited for intermittent use, where the air tank can top up without damaging the item. You have to be careful because if the pressure is below the value, the compressor will cause the extra time to fill the double tank.

How do I connect two air compressors?

To connect two air compressors you can follow the following steps: 1. Unplug Your Compressor First of all, pull the plug on your compressor, and void any compressed air in the tank into the atmosphere by opening the tank drain valve and letting it drain out. 2. Pick Your Location Where do you put the extra tank?

How do you connect a Compressor tank to a tee?

Just as the connector on your compressor tank has a checked coupling to keep the air in the tank when there isn't a connector attached to it, the coupler you've added to the Tee on the new tank will keep the air in both tanks until you're ready to insert an airline connector into it. Installing the Second Tank Steps:

Should I add another air receiver tank to my air compressor?

The key benefit on offer from adding or connecting another air receiver tank to your air compressor is the ability to have a larger storage capacity of air! This allows the air compressor motor to run for a far longer period before reaching its cut-out pressure and does not allow you to use your pneumatic tools for this period.
