

# How to install the drill tail of the anchor trolley rock drill

How do you install expanding rock anchors?

7 key steps to install expanding rock anchors. Choose anchor site carefully. Rock anchors will only perform effectively in solid competent rock (Class 0 Soil). Drill the hole into the competent rock a minimum depth of 12 inches along the drill steel. Be sure to drill so that the anchor rod will be in line with the guy.

How do you drill a Titan anchor?

Drill the hole slightly inclined (around 10 degrees up) for our twist-leg anchors and at right angles for both types of Titan Climbing anchors. This is to ensure the anchor eye will sit flush against a flat rock surface. Titan staples require particularly skilled drilling to ensure both legs are centred in their respective holes.

How do you drill a hole with a wedge anchor?

Be sure to thoroughly clean the drilled hole of rock dust and debris. Slide the anchor down in the hole. Use a bar through the eye to turn the rod until the anchor is fully expanded against the sides of the hole. Removing the wedge tie will occasionally facilitate the wedge expansion.

How do you use a rock anchor Rod?

Use a bar through the eye to turn the rod until the anchor is fully expanded against the sides of the hole. Removing the wedge tie will occasionally facilitate the wedge expansion. Rock anchors set in holes drilled 12 inches deep in competent Class 0 Soil (hard rock) will develop the full strength of the anchor rod.

How do you drill a hole in a rock template?

is given Drill holes : Begin at the highest point of the rock and drill a 2 inch diameter hole through the template to a depth of 24 inches. Continue drilling the remaining holes through the template to the same depth, when measured from a horizontal line. All rock dust should be c

How do you drill a hanger stud?

Ensure you are using the correct drill bit diameter and length - this is crucial for expansion bolts. Ensure the location is as flat as possible upon which the hanger will sit. Drill the bolt hole at right angles to the rock surface AND over-drill the hole to enable the stud to be hammered into the rock and patched in later years if needed.
