What are the requirements for a drilling contract?

**GENERAL REQUIREMENTS** Typical drilling contracts include a plan and a proposal. The Plan shows the proposed locations of the borings, the utilities in the area of the borings, and special notes that are appropriate to the plan.

What is included in a drilling contract?

Typical drilling contracts include a plan and a proposal. The Plan shows the proposed locations of the borings, the utilities in the area of the borings, and special notes that are appropriate to the plan. Frequently, each plan sheet includes a table of the borings for that sheet with their proposed location and estimated depth indicated.

What information is included in a drilling log?

The top of each boring log provides a space for project specific information: name or number of the project, location of the project, drilling contractor (if drilling is contracted out), type of drilling equipment, date and time of work, drilling methods, hammer weight and fall, name of personnel logging the boring, and weather information.

Do you need a preplanning plan for horizontal directional drilling?

Preplanning is used in all aspects of the horizontal directional drilling (HDD) process. Whether it is planning the jobsite layout or the restoration, there should be a plan for it. One area that is commonly overlooked is creating a rod-by-rod bore plan.

What is directional drilling?

Just a general discussion of the concepts at work. One of the amazing features of directional drilling is that we have the power to steer the bit in three-dimensional space. Up, down, left AND right. Almost every HDD bore is going to involve a curve in cross-sectional view; however, many sites will also require curvature in plan view as well.

What information is needed for preparing a drilling contract?

These guidelines provide the information that is necessary for preparing drilling contracts including: example scope of services; soil identification system; safety requirements; drill log preparation; site requirements; and the specification for providing subsurface explorations in contaminated areas. 1. **GENERAL REQUIREMENTS**
