

How to replace bearings for screw air compressor

Can You rebuild an air compressor?

We can rebuild most air compressor brands we sell and service. Rebuilds include new gaskets, bearings, O-rings, repair of rotors, and seals, metalizing the shafts, inlet valve rebuild, and end plate repair if needed. We can also service the drive motor, "clean & bake" the windings, and install new seals and bearings on direct-drive units.

What is a compressor bearing?

Compressor bearings are specially designed to support the rotating parts of a compressor, such as the rotor and shaft. These bearings ensure smooth machine movement, minimize friction, and help absorb the forces generated during compressor operation.

How do you remove a compressor bearing from a car?

First remove the tension on the belt and slide it off the AC pulley. 5) Remove the snap ring that holds the bearing in place. 6) Then I used a small (3 inch) three jaw puller to remove the pulley and the bearing off the compressor body. The whole process took less than an hour from the top of the car. At this point in time, I had two choices:

What happens if a compressor bearing is damaged?

Complete Compressor Failure: A damaged bearing can lead to total compressor failure. Repair costs can be high, as the entire A/C unit may need to be replaced, not just the bearing. **Higher Repair Costs:** Ignoring the issue could lead to even more expensive repairs, such as replacing the compressor or other critical system components.

How do you remove a compressor shaft?

The compressor shaft ends with a 7mm hex head that looks like a bolt. If you are lucky you should be able to use a 7mm socket, a large wrench and unscrew the hub plate from the compressor shaft. For that keep the belt on (it should prevent the pulley and hub plate from spinning) and rotate the compressor shaft **CLOCKWISE**.

Does industrial air power rebuild rotary screw air compressors?

We rebuild your air end and return it to you, like new! Industrial Air Power is your premier resource for air-end rebuilds for all rotary screw air compressors from 10hp up to 1000hp. With thousands of remanufactured air ends completed since 2008, Industrial Air Power offers a reputable, reliable air end rebuilding service with unrivaled prices.
