What is oil injected screw compressor?

Oil-injected screw compressors are widely used in various industries to provide a reliable and continuous source of compressed air. They are a crucial component in numerous applications, from manufacturing to automotive industries, where consistent and efficient air systems are required.

Why are oil injected screw compressors better than reciprocating compressors?

Unlike reciprocating compressors, which create considerable vibration and noise, the rotary mechanism of screw compressors provides smoother operation, resulting in a quieter working environment. Oil-injected screw compressors are versatile and can be used in a variety of applications.

How does a screw compressor work?

The screw compressor element When the inlet/unloader valve is open, the air enters the compressor screw element. The screw element works like a pump and it compressed the air. During this process, oil is injected in the element. The oil is there to cool the air, as the air gets very hot during compression.

How does compressed air & compressor oil work?

Now we have a mixture of compressed air and compressor oil. Compressed air/oil mixture This mixture leaves the screw element through a one-way valve. This valve makes sure that the oil cannot flow back into the compressor element through the exit pipe (this could happen when the compressor stops).

What is compressed air oil used for?

The oil is there to cool the air, as the air gets very hot during compression. It's also there for lubrication and sealing off the clearances between the screws. More detailed information can be found on our screw air compressor element page. Now we have a mixture of compressed air and compressor oil. Compressed air/oil mixture

Do oil-injected compressors provide 100% oil-free air?

While oil-injected compressors do not provide 100% oil-free air, the oil content can be reduced to extremely low levels, making them suitable for many applications. However, for applications requiring completely oil-free air, oil-free compressors may be more appropriate.
