How does a K-Series Compressor reduce energy consumption?

cut of 35% in the lifecycle cost of a compressor. energy consumption, this K-series can significantly reduce energy consumption. It can control production of air volume by variable speed control in accordance with actual demand of compressed air. Capacity of sequencer control mode for maximum 16 machines. External sequencer is unnecessary.

Who developed the first turbocompressor in Korea?

SeAH Engineering, which developed the first turbocompressor in Korea, has grown its expertise in the compressor field, such as Korea's largest landfill gas compressor, eco-friendly steam regeneration compressor, and nuclear power generation compressor, based on its long experience and R&D achievements.

How much energy does a compressor save?

potential energy savings of 30 to 50 %. Over 80% of a compressor's lifecycle cost is taken up by the energy it consumes. week or even month. Extensive measurements and studies of compressed air demand profiles show that many compressors have significant variations in air demand.
