A flushing current conveys the loosened drill cuttings upwards and exits at the upper end of the casing. If you have any further questions, please contact our local sales or service team. DTH hammer drilling is a percussive drilling process powered by compressed air.

How to use DTH hammer?

1. Setting the DTH hammer with drill rod and casing on the drilling point.
2. Rotary and percussive drilling of the drill string under compressed air supply.
3. After reaching the final depth, unlocking of the drill rod with DTH hammer and pilot bit.
4. Withdrawal of the drill rod, DTH hammer and pilot bit out of the casing.
- 5.

How do you drill a rock with a DTH hammer?

This method is mainly applied for hard to very hard rock and/or for penetrating large boulders. 1. Setting the DTH hammer with drill rod and casing on the drilling point. 2. Rotary and percussive drilling of the drill string under compressed air supply. 3. After reaching the final depth, unlocking of the drill rod with DTH hammer and pilot bit.
