What is oil injected air screw compressor?

Oil injected air screw compressors are equipped with air end instead of pistons. Air is compressed by two rotating rotors between two lobes towards outlet. Oil injected air end which consists of rotor with asymmetric helical profile, bearings and housing are manufactured by state of art technology to provide maximum performance.

How does a air compressor work?

Ambient air is drawn through the intake filter and the multifunctional control system into the screw compressor block. This block consists of a pair of screw rotors. The main rotor, driven by an electric motor, takes the secondary rotor with it. The air is drawn in by the rotation of both of the interlocking rotors and is continually compressed.
