

Rock drill angle adjustment method diagram

How to optimize drilling parameters?

Optimizing drilling parameters requires careful adjustments among rotary speed, thrust on the bit, percussion blow count and energy, and sufficient volume of compressed air at an adequate pressure to remove drilled rock cuttings. drilling cost per foot and wear on the bit and drill string are minimized.

How do you drill a rock rig?

Levers on left control panel. Make sure that the engine speed is at least 1300 rpm. Charge the compressor, button (5). Set the rig in drilling position. Button (4). Lower the drill bit toward the rock. Set the desired drill depth in the F1 menu (B) and reset the depth meter (A). Lower the suction hood to the ground.

What is a drill rig instruction manual?

81 This instruction manual is part of the complete delivery of the drill rig. It provides information on the design and operation of the drill rig and contains advice and the measures necessary to keep the rig operational. This instruction manual is no replacement for thorough training on the drill rig.

How do I set a drill angle?

You can then select a hole using the arrow keys and pressing enter. The set angles will automatically be included in the menu. Use the boom positioning lever or autofeed-button (button 34 on right drill lever) (option) to set the angles. Select menu F1.

How do I set up a drill rig?

Set up the drill rig horizontally using the buttons Track oscillation (left, right) (21-24). Left control panel. Lower the jack (option) firmly on the ground without lifting the drill rig. Button (17). Lock the track oscillation cylinders. Button (25). Boom and feeder positioning.

How do I change the drill hammer & drill rod position?

Open the Consumables menu by selecting Logging in the System menu and then Consumables. Check which drill bit, drill hammer and drill rod are used at present. Change in the list if necessary. Recalibrate the system if changes have been made to the drill rod position. Start drilling.

ROP The Rate of Penetration (ROP) is the key parameter when drilling with impregnated bits. Finding the optimum ROP for a given rock type, rock condition, bit and model of diamond drill ...
