How a blasting method is used in rock excavation?

The blasting sequence & methods employed rock excavation should be submitted for review & approval of contractor / Customer. For shallow rock cutting drilling of holes shall be carried by jack driller , for deeper blasting wagon mounted drill shall be used. The explosives shall be charged as per the calculations & blasting carried.

How to excavate rock?

When it comes to rock excavating,blasting,ripping and breakinghave been popular methods to excavate rock and has been a part of construction engineering for X number of years. In any blasting situation,the geologic structure of the rock mass will be the most important consideration.

What are the methods used in hard rock excavation?

Here are the primary techniques used in hard rock excavation: Drilling and blastinginvolve drilling boreholes into the rock,filling them with explosives,and then detonating them to fracture the rock mass. This method is ideal for large-scale projects requiring the removal of very hard rock or significant rock masses.

What is the breaking method of rock excavation?

The breaking method of rock excavation involves using tools like hydraulic hammers,which deliver powerful,repetitive blows to fracture and break rock. This process often includes drilling holes into the rock surface to create weak points,making it easier for the hammer to break the rock into smaller,manageable pieces.

What is rock excavation?

Rock excavation is the process of removing rock masses from a job site to prepare the ground for construction or mining projects. This involves breaking and removing rock using various methods, such as blasting, drilling, and using heavy machinery like excavators with hydraulic hammers.

What is the procedure for excavation in rocks?

The procedure for excavation in rocks is different than excavation in ordinary soils. It requires skilled manpower and specialized tools and equipments for excavating the rocky ground. Excavation in rock requiring drilling and blasting shall be done under coordination of competent and responsible supervision.
