

Rock drill nitrogen filling process video

Why is nitrogen used in downhole drilling?

Due to its inert nature, the use of nitrogen in downhole drilling operations has significantly reduced the risk of explosions occurring within confined spaces where hydrocarbons being recovered interact with air. Also, employing nitrogen gas facilitates the use of less heavy drilling fluids.

Can nitrogen gas be used in drilling operations?

While established uses for nitrogen gas, such as tank and pipeline blanketing, nitrogen purging, and inerting operations continue to sustain the industry, the use of nitrogen in drilling operations to boost dwindling reservoir pressures and maintain maximum productivity has become increasingly popular.

How does nitrogen gas work in a well?

In many cases, liquids may accumulate within an active well preventing the easy flow of formation fluids. In these instances, nitrogen gas can be pumped into the reservoirs to remove these stagnating liquids and improve flow. The nitrogen gas is channeled through coiled tubes to pump out the accumulated fluids inhibiting optimal productivity.

Can nitrogen gas be used in well completion applications?

Due to its favorable physical properties such as inertness, high-pressure stability, and low density, nitrogen gas can be used in various well completion applications. Routine well completion applications of nitrogen gas include: Another effective use of nitrogen produced by on-site generators is in improving drilling techniques.

How is nitrogen used in gas fracking?

In these instances, nitrogen gas can be pumped into the reservoirs to remove these stagnating liquids and improve flow. The nitrogen gas is channeled through coiled tubes to pump out the accumulated fluids inhibiting optimal productivity. Using nitrogen in gas fracking activities is not limited to one area.

What is Nitrogen Lifting in oil & gas?

Nitrogen gas can be introduced into oil and gas reservoirs in a procedure known as nitrogen lifting. This technique can be used to restore satisfactory pressures to wellbores when natural formation pressures fall as wells age. What Is Nitrogen Lifting?
