

Screw air compressor intercooler pressure is high

Does high intercooler pressure cause high temperature?

Hello Agung, The high pressure and the high temperature are related to each other and are the same problem. Higher intercooler pressure will result in a higher temperature of low pressure element. Your intercooler pressure is way too high. Normally it is around 2 - 2.5 bar only.

Do I need an intercooler inspection for my centrifugal compressor?

Contact your local authorized FS-Elliott Channel Partner Representative to schedule an intercooler inspection for your centrifugal compressor. Operating with dirty intercoolers increases the risk of higher air temperatures and reduces air density during compression.

How does an air compressor intercooler work?

The air compressor intercooler's main function is to cool air before it enters the next stage of compression. The higher density of cool air makes it easier to compress than hot air. Ideally, the air should be as close to the ambient air temperature as possible.

What are some common air compressor troubleshooting tips?

The following air compressor troubleshooting tips can help solve some of the most common problems that are known to occur with air compressors. *Check for cooling air restriction. *Improve ventilation of compressor room. Compressor does not start or stops during operation. Elektronikon shows motor overload problem. Find cause and remedy.

What causes a screw air compressor to fail?

The repaired air compressor failures include, but are not limited to, high temperature, insufficient air pumping, overpressure of the main engine, overload of the motor, and excessive noise. Among them, the high temperature of screw air compressor is caused by many reasons, external and own reasons.

How does a multi-stage compressor intercooler work?

The cooled air, with reduced moisture, then passes through the next stage of compression, where the intercooling process is repeated. Keeping intercoolers clean is a vital component of scheduled preventative maintenance for your multi-stage compressor.

A too high intercooler pressure results in a too high compression ratio of the low pressure element, which results in a too high temperature. Please let me know ...

By: Cas | Posted on: 12-05-2020 Industrial screw compressor have an operation state called "unload running". In this article we'll discover what this is, why it is ...

Screw air compressor intercooler pressure is high

With the increase of intercoolers for air compressors, a series of coolers suitable for various working conditions and different models has naturally formed. But the air compressor ...
