Does industrial air power rebuild rotary screw air compressors?

We rebuild your air end and return it to you, like new! Industrial Air Power is your premier resource for air-end rebuilds for all rotary screw air compressors from 10hp up to 1000hp. With thousands of remanufactured air ends completed since 2008, Industrial Air Power offers a reputable, reliable air end rebuilding service with unrivaled prices.

How does a screw compressor work?

A screw compressor can run loaded ('pumping air') or unloaded ('idle'). The inlet/loading valve opens and closes according to air demand. The inlet valve is controlled by a solenoid valve that supplies control air to the inlet/loading valve. Check solenoid valve coil and solenoid valve operation.

Can You rebuild an air compressor?

We can rebuild most air compressor brands we sell and service. Rebuilds include new gaskets, bearings, O-rings, repair of rotors, and seals, metalizing the shafts, inlet valve rebuild, and end plate repair if needed. We can also service the drive motor, "clean & bake" the windings, and install new seals and bearings on direct-drive units.

How long does a screw compressor air end last?

However, a new air end can last as long as 100,000 hours or require a rebuild in as little as 50,000 hours or less, depending on operation and maintenance. An oil-flooded screw compressor that is not used continuously may last up to twenty years before requiring an air end replacement or rebuild.

How do rotary screw air compressors work?

As the rotors turn, air is trapped in chambers created by the precisely machined interlocking screws. As the rotors continue to turn, these pockets of air are moved along the rotor, getting progressively smaller. This reduction in volume results in the air being compressed. What is the air end of a rotary screw or rotary vane compressor?

The air end of a rotary screw or rotary vane compressor is the part of the machine that actually makes air. In other words, it is the mechanical element that compresses air from atmospheric pressure to the required pressure (PSI) for your application.
