What is a compressor process seal?

A compressor process seal (air seal or Gas Seal) prevents the process gas in the compressor from entering the atmosphere using a differential pressure. It also prevents the atmosphere from entering the process gas in the compressor by sealing the rotating assembly in the stationary compressor case.

How do compressor air seals work?

Compressor air seals (gas seals) work on the principle of " differential pressure control". As the process gas is pumped through the compressor,its pressure is usually balanced between the discharge seal and the suction seal,so that both seals operate at the same pressure.

How do you rebuild an air compressor pump?

Rebuilding the air compressor pump restores the pump's ability to efficiently compress air. If the tank won't build pressure because the pump seals or valve plate are worn,rebuild the pump using the manufacturer-approved air compressor parts. Most air compressor models use a kit for rebuilding the air compressor pump.
