

Screw air compressor spray machine operation video

How does a screw compressor work?

A screw compressor can run loaded ('pumping air') or unloaded ('idle'). The inlet/loading valve opens and closes according to air demand. The inlet valve is controlled by a solenoid valve that supplies control air to the inlet/loading valve. Check solenoid valve coil and solenoid valve operation.

How do air compressors work in spray painting?

When it comes to spray painting, air compressors are commonly used to provide the necessary air pressure to atomize and propel paint particles from the spray gun onto the surface being painted. The air compressor takes in ambient air and compresses it, storing it in a tank at a specific pressure.

How do you use an air spray gun?

Put on your safety gear: respirator or mask, goggles, and gloves. Connect your air spray gun to the air compressor using a hose and necessary attachments (such as a filter, regulator, and quick disconnect fittings). Ensure that your air compressor is delivering adequate CFM (cubic feet per minute) as required by your spray gun.

How do I choose a spray paint compressor?

Most air paint spray guns use a "high volume, low pressure" (HVLP) delivery mechanism, thus it's important to find a spray paint compressor that delivers the required pressure and volume of air in order to create a consistent paint flow that will give you a perfect finish.

What type of compressor is a screw compressor?

Screw compressors are categorized as intermittent motion compressors (non-continuous flow). They can also be categorized with medium flow and medium pressure compressors compared with other types of compressors on pressure /flow chart for compressor types.

How does a compressed air compressor work?

The compressed air is compressed with oil (flooded type) inside the compressor, and then the compressed oil and air are introduced to an oil separation unit to separate oil and air. Then the air is removed to the discharge line and oil is returned to the oil filter for filtration, then to the suction of compressor again.
