How does a drill press work?

There is a collar attached to the table that clamps to the column. Most drill presses, especially larger ones, make use of a rack and pinion mechanism to allow the loosening of the clamp without the heavy table sliding down the column. Most drill presses allow for the table to tilt to allow for angled drilling operations.

How does a drill table work?

There is a lock mechanism, usually a bolt, that holds the table at 90° to the bit or any angle between 90° and 45°. The table tilts both ways, and it is possible to rotate the table to a vertical position to end-drill. There is usually a tilt scale and pointer to indicate the angle of the table.

How do you drill a long stock?

When drilling long stock; put work on the drill press table, long end to the left of the drill press operator. Lower the drill bit to the work and align the center punch mark with the drill bit. Then tighten the quill lock and clamp the material to the table using a clamp. Use support to hold up the unclamped end of the stock.

How do you use a drill lever?

Operate the rotation unit up with the drill pipe, drill lever position (c), until the pipe stops with the thread inside the upper drill-steel support. Close the drill-steel supports. Open the rod handling grippers and move out the rod handling arms so they grip the pipe. Lever 35 position (c). Release the lever to the neutral position.

Why do you need a drill press table clamp?

Increasing drilling safety- Drill press table clamps securely lock your workpiece to the table, preventing it from shifting or sliding as you drill. This reduces the possibility of accidents and injuries caused by a loose or unsteady workpiece.

How do you secure a drill press Chuck?

Secure bit by tightening in each hole of the drill chuck. Remove the chuck key before the drill press is turned on. Clear the drill press table of all tools, metal, rags, etc. before drilling. Secure all work in a drill press vise or with a clamp before drilling. Never hold material by hand while drilling.
