

The gasoline rock drill has abnormal speed

Why is the drilling speed slow?

Slow drilling speed Problem: The drilling speed is slow, affecting the construction period. Cause: Improper drill bit selection, unreasonable drilling parameters. Solution: Select the appropriate drill bit and optimize the drilling parameters (such as rotation speed, drilling pressure). 8. Well deviation

What happens if a well is drilled unexpectedly?

During the process of well drilling, many unexpected situations may happen. The following are 12 common problems, their possible causes and solutions: 1. Drilling equipment failure Cause: Equipment aging, improper operation, material quality issues.

Why is my drilling tool stuck in a well?

9. Stuck pipe Problem: The drilling tool is stuck in the well and cannot move. Cause: Wellbore collapse, drill cuttings accumulation, friction between the drilling tool and the wellbore. Solution: Use pipe releasing agents, adjust the mud performance, and conduct fishing operations if necessary.

What are the problems of drilling a well?

Problem: Sudden ejection of high pressure underground fluids (water, gas). Cause: High formation pressure, insufficient mud density. Solution: Use blowout preventers, adjust the mud density, and control the drilling pressure. 6. Water quality problems Problem: After the well is drilled, the water quality does not meet the requirements.

What causes a safety accident during well drilling?

Problem: Safety accidents occur during the drilling process. Cause: Improper operation, equipment failure, lack of safety training. Solution: Strengthen safety training, regularly inspect the equipment, and develop emergency response plans. There may be many problems during well drilling, involving equipment, geology, operation, and environment.

Why are drill bits so expensive?

Rapid wear and tear on drill bits is a common problem that can lead to high costs due to frequent tool replacement. Wear can be caused by using poor quality drill bits, applying excessive pressure, incorrect rotational speed, or drilling abrasive materials.

Solution: Use suitable drill bits and drilling techniques, such as diamond drill bits for hard rocks and mud wall protection for loose formations. 3. Wellbore collapse Problem: The wellbore is ...
