

The oil level of the screw air compressor is low during operation and the shutdown is high

What are common faults in screw air compressors?

Common faults in screw air compressors include difficulty in starting, automatic shutdown, abnormal vibrations, and temperature anomalies. The main causes involve improper slide valve positioning, component wear, insufficient voltage, pipeline vibrations, and inadequate oil levels.

How to prevent cold temperature when compressor is shutdown?

Consider prevailing wind to prevent cold temperature when the compressor is shutdown. Cold oil temperature in the radiator and sump can cause insufficient oil circulation due to high viscosity. Compressor discharge pressure is normal but the entire shop has low pressure. Low at the main line plant air header?

What causes a screw air compressor to fail?

The repaired air compressor failures include, but are not limited to, high temperature, insufficient air pumping, overpressure of the main engine, overload of the motor, and excessive noise. Among them, the high temperature of screw air compressor is caused by many reasons, external and own reasons.

What if air compressor exhaust temperature is too high?

There are various high temperature conditions of air compressors. If the exhaust temperature is too high, first try to use the experience of the editor to carry out the following investigation step by step: 2) Check whether the lubricating oil is clean and the oil level is normal.

How to check air compressor oil level?

1). The air compressor is short of oil: check the oil level of the oil and gas barrels after stopping and releasing the pressure. The oil level should be slightly higher than the high oil level mark H (or MAX).

What causes a compressor to stop working?

Compressor filled with lubricating oil or liquid refrigerant: Excessive oil or refrigerant occupies compression space, making starting difficult. Component wear or burning: Wear or burning of moving parts disrupts normal fit, affecting starting performance. Insufficient voltage: Unstable power supply fails to provide adequate starting power.
