

Tutorial on how to start a down-the-hole drill

How does a down-the-hole hammer drill work?

The down-the-hole hammer drilling process begins with the hammer being located behind the drill bit, which is then connected to the end of the drill string. When activated, the piston strikes the back of the drill bit, creating powerful blows that break apart rock formations.

Why is down-the-hole hammer drilling a good choice?

Additionally, it provides better hole quality and requires less energy, making it a cost-effective and efficient choice for various drilling projects. Down-the-hole hammer drilling is commonly used in mining, construction, geothermal exploration, and water well drilling due to its ability to efficiently penetrate hard rock formations.

How does a DTH drill work?

DTH equipment consists of a drilling hammer and a piston-powered by compressed air. As the drill string rotates, the drilling hammer strikes down on the rock. The drill bit receives its striking power from a piston inside the hammer that is powered by compressed air.

What is a down-the-hole drill?

A down-the-hole drill, usually called DTH, is basically a mini jackhammer screwed on the bottom of a drill string.

How long did it take to drill a 12,000 ft hole?

The original estimate for completion of a 12,000-foot hole was 30 days using the conventional rotary technique, which was reduced to 13 days using the DTH method. Before DTH was used, drillers would typically case the vertical portion of the well and convert to rotary drilling to drill at a tangent.

What is a DTH drill rig?

A down-the-hole drill, usually called DTH Drilling Rig, is basically a mini jackhammer screwed on the bottom of a drill string. The speedy hammer activity breaks hard stone into little flakes and dust and can be dismissed evident by the air exhaust in the DTH hammer.
