What is hydraulic rock drilling?

This reliable technology, which was introduced in the 1970s, employs hydraulic power, independent rotation, and separate flushing systems to drill through hard rock formations. Hydraulic rock drilling delivers superior accuracy, automation, and efficiency, making it fundamental to the operations of drill rig manufacturers worldwide.

Which hydraulic rock drill is best?

HYCON offers two powerful rock drills to match your specific task. The compact design and high performance of the HRD30 give you great impact in narrow and tight workspaces. With an integrated compressor and CCW rotation, the HRD30 is the most effective handheld hydraulic rock drill on the market.

How does a hydraulic rock drill work?

The hydraulic type relies on hydraulic pressure to impact the steel by inert gas and impact body to hammer the rock. When the impact mechanism of these rock drills is in the return stroke, the rotating mechanism forces the steel to rotate the angle, so that the bit changes position and continues to chisel the rock.

Why should you use hydraulic rock drills?

Versatility: Adaptable to various rock types and geological conditions, enhancing flexibility for different excavation tasks. The industry's current trends prioritize enhancing drilling speed, efficiency, and tooling for larger hole sizes, all while increasing the power of hydraulic rock drills.

What is integrated hydraulic rock drill & splitter?

Integrated hydraulic rock drills and splitters are widely used in open-pit mines, quarries, building foundations, tunnel excavation, road construction, water conservancy projects, etc. The integrated hydraulic rock drill and splitter is to install the hydraulic rock drill and rock splitter on the excavator.

Why do you need a hydraulic rock drill & splitter?

There is no need to frequently move the equipment during work, which greatly improves rock breaking efficiency. Integrated hydraulic rock drills and splitters are widely used in open-pit mines, quarries, building foundations, tunnel excavation, road construction, water conservancy projects, etc.

Ranger(TM) DX800 is a hydraulic, diesel-powered, self-propelled top hammer drill rig with an ergonomic cabin and rod handling system. Typical applications are ...

RDM offers optimized drilling solutions and professional hydraulic rock drills for mining and tunneling, enhancing productivity and reducing costs.
