Can a rock splitter be mounted on an excavator?

This video shows the working of rock drill and splitter attachments mounted on an excavator. Compared with traditional single-piece rock splitters, there is no need to purchase or rent an additional drilling machine. Only one excavator can complete drilling and rock splitting operations.

What attachments do Excavators use?

Specific attachments, such as rippers, rotary cutters, and rock trenchers, enhance the excavator's ability to break and remove rock efficiently. Rippers are used for tearing through hard rock and breaking it into manageable pieces, while rotary cutters are ideal for precise cutting and shaping of rock surfaces.

How many ExcaDrill units can be used on different Excavators?

One ExcaDrill unit can be used on many excavators, i.e. only the drill attachment is moved from one site to another. With the help of ExcaDrill it is possible to drill more efficiently due to the wide working radius and the good maneuverability of the excavator.

Can a rock splitter be installed on a 20-50 ton excavator?

It can be installed on any 20-50 ton excavator. Compared with traditional single-piece rock splitters, there is no need to purchase or rent an additional drilling machine. Only one excavator can complete drilling and rock splitting operations.

What is rock excavation?

Rock excavation is the process of removing rock masses from a job site to prepare the ground for construction or mining projects. This involves breaking and removing rock using various methods, such as blasting, drilling, and using heavy machinery like excavators with hydraulic hammers.

What are the methods used in hard rock excavation?

Here are the primary techniques used in hard rock excavation: Drilling and blasting involve drilling boreholes into the rock, filling them with explosives, and then detonating them to fracture the rock mass. This method is ideal for large-scale projects requiring the removal of very hard rock or significant rock masses.
