

Water Well Drilling Rig Safety Production Video

What is a water well drilling rig?

A water well drilling rig is a machine designed to drill a borehole into the ground to access groundwater. Water well drilling rigs come in various sizes and types, ranging from small portable rigs used for household wells to large, powerful rigs used for commercial and industrial applications.

What types of drilling rigs are available?

The drilling videos featured here on our website showcase the capabilities of various types of drilling rigs, including water well drilling, auger drilling, core drilling, and more.

What is the first step in drilling a well?

The first step in drilling a well is the planning phase. Members of the oil companies, executive staff and senior exploration team meet to review information associated with a prospect and to get an understanding of the scope of work involved.

What are the different types of drilling rigs offered by Simco?

With a focus on the specific processes involved in geothermal drilling, geotechnical drilling, and water well drilling, these drilling videos enable you to see the differences between the various drilling rigs offered by SIMCO. A variety of geothermal drilling videos allow you to view Air Rotary DTH Hammer and Mud Rotary drilling.

How does a gas well work?

During this process the liquids from the well are heated, the oil separates and floats to the top of the settling water while gases break free and rise to the top of the tank. The gas passes through the mist extractor at the top of the tank and is sent to be stored or flared.

What happens after a rig is erected?

After the rig is erected equipment is moved onto the rig floor, assembled and connected to power sources or pressurized piping systems. Some operators utilize an alternative method of managing returned fluids and solids called 'A Closed Loop System' which may reduce or eliminate the need for reserved pits.
