What is a drilling air compressor?

A drilling air compressor supplies compressed air to the drilling air control system. It is also used as a power source to drive the engine's starter motor, Kelly rotator and power clamp. Piston (reciprocating) air compressors are usually used on different types of drilling rigs and are driven by internal combustion engines or electric motors.

What type of air compressor is used in drilling equipment?

Most drilling equipment uses two-stage air compressors. To maintain a constant air pressure in the air control system, the air compressors used in drilling equipment have an automatic control system. The air compressor starts when the pressure falls below a specified level and stops when the pressure rises above a specified level.
