

# What are the causes of rock drill failure

What happens if a drill bit breaks through a rock formation?

With the persistent wear and tear, these components can degrade over time, leading to reduced efficiency, and in some cases, catastrophic failure. One of the primary concerns with equipment wear is the drill bit, which is responsible for breaking through rock formations.

What causes a tool to fail?

On rare occasions manufacturing errors can compromise the service life of our tools and lead to premature failure. Most of the failures are however a direct result of improper working practices or incorrect service. In the vast majority of cases it is operating procedures or field conditions that are causing the failure.

What happens if you drill in non-abrasive rock?

Drilling in non-abrasive rock creates micro-fractures in the carbide sometimes looking like snake skin. The rock leaves a shiny surface. Use a softer carbide grade on the buttons and a fatigue in the surface of the cemented carbide, leading to button failure. Excessive button protrusion through incorrect grinding or steel wash.

Why do drill strings fail?

There are several reasons why drill string failures occur. One of the most common is fatigue, which results from the repeated stress and strain the drill string experiences as it rotates and is pushed against the rock face at great depths and under extreme pressures.

What causes a drill string to break?

One of the most common is fatigue, which results from the repeated stress and strain the drill string experiences as it rotates and is pushed against the rock face at great depths and under extreme pressures. This fatigue can lead to cracks and eventual failure of the drill string components if not monitored and managed appropriately.

Why do Sandvik drills fail?

Hole misalignment through poorly serviced rigs, bad collaring and wandering holes are the foremost factors contributing to stress in the drill string and subsequent tool failure. It is imperative that all reasonable measures are taken to drill straight holes. Sandvik tools are designed and manufactured within strict tolerances.
