Within the US,a boom in energy demand driven by rapid electrification and AI-serving data centers is boosting power costs for homes and businesses,yet fossil fuel producers are notrushing to ramp up drilling.

Does the DPR metric represent New-well oil/natural gas production?

The metric does notrepresent new-well oil/natural gas production per newly completed well. The DPR metric legacy oil/natural gas production change can become unstable during periods of rapid decreases or increases in the volume of well production curtailments or shut-ins.

Why is drilling on public lands bad?

Meanwhile, she said, drilling on public lands can pollute the air, raise noise levels, cause spills or leaks, and restrict movement for both people and wildlife. Earlier this year, Congress killed an EPA rule finalized in November that would have charged oil and gas companies for flaring excess methane from their operations.

Does new-well production per rig rise or fall?

August 2020 Supplement: Rig counts fall but new-well production per rig rises as new-well production persists.
March 2020 Supplement: Base production accounts for a material share of total U.S. tight oil production.

How does the DPR metric affect oil & natural gas production?

The DPR metric legacy oil/natural gas production change can become unstable during periods of rapid decreases or increases in the volume of well production curtailments or shut-ins. This effect has been observed during winter weather freeze-offs,extreme flooding events,and the 2020 global oil demand contraction.
